Using DaFoat fonts

- 1. Go to <u>www.dafont.com</u>
- Choose a font, type your text in the "Custom Preview" window
- Select "Large" size and submit. You will find your text preview below.
- Take a screenshot of your text: ∧

Hold down **shift + command + 4**, then click & drag a box around your text

0				44
LAYERS	CHANNELS	PATHS	C.S.S.	•≣
	RGB		3	82
	Red		3	83
9	Green		3	84
9	Blue		3	85
	0		٦	8 .:

 Now for the slightly tricky part - getting rid of the white space around the text. Go to the Layers window and click on the Channels tab.

2. Then click on the **Load channel as selection** button. It will make your image look like this.

	Select	Filter	Analysis	3D	
and Solution	All		ж	A	
	Deselect		H	D	
33	Resel	ect	∂ #	D	
~	Invers	se	10 米		
20	All La Desel	yers ect Laye	₹₩ ers	A	
	Simila	ar Layers	5		
	Color	Range			
ALC: NO POST	Refine Modif	e Edge y	. 7#	R ►	
	Grow Simila	ır			
1.00	Transform Selection				
	Edit in Quick Mask Mode				
-	Load Selection Save Selection				

Almost there! Now go to Select > Inverse.

Next, copy + paste your newly selected layer. (*Shortcut:
Command + C, Command + V)

 Hooray! There's your text, without the white background.
Now you can just delete the original text layer.

If you want to change the color of your text, go to your layers window, select your new text layer, and select the lock pixels button.

Then select a **color** and use the **paint** brush to fill in your text.
